

Avellio

THE RESULTS-FIRST INSPECTOR

Migration Guide

A new UXP workflow, with the old manuals preserved

Avellio 2.0.0

Describes plugin 2.0.5 source review

Documentation edition · 30 October 2026 · Revision 7

Inspect. Review. Decide. Verify.

For Adobe InDesign 2026 · UXP panel

Source-edition documentation · Revision 7

1. Two documentation versions

The default web manual is now the **Avellio 2.0.0** documentation collection. It describes build **2.0.5 source review**. Use the **Avellio 1.1** tab for the preserved 1.1.0 Q3 2026 workflow and PDFs. This documentation change does not automatically update the installed plugin or announce a final 2.0 release.

Edition availability: This guide describes the source edition checked on 29 October 2026. The previously prepared 2.0.5 installer does not include the new Typography recommendations. Installed-panel validation of those recommendations remains pending.

2. What changes

Avellio 1.1 documentation	Current Avellio 2.0 workflow
ExtendScript Loader + protected Engine	Adobe InDesign UXP panel and CCX installation
Scripts-panel launch	Open Avellio 2.0 as a plugin panel
Inspect Styles / Inspect Typography tracks	White Space / Styles / Typography areas sharing one queue
Legacy Fix Plan and Safe Clean terminology	Contextual Preview fix, constrained solver and eligible single-property style reset
Typography CSV, Override CSV, Fix TXT	Privacy-safe comprehensive diagnostic JSON and Publication aggregate report
Seven old workflow profiles	Six current built-in inspection profiles plus custom/local/imported team standards
AUTO + 34 legacy locale profiles	Current automatic resolver plus 44 registry entries, including neutral

Additional 2.0 workflows include separate identity/frequency/override maps, transferable matching style colours, protected team-profile custom copies and a one-proposal-per-story solver review queue. Read the current manual's reference chapters instead of treating those controls as the old 1.1 heatmap or bulk-cleanup commands.

The single-document diagnostic export minimizes document identity, but Publication reports include document names for drill-down and colour-map transfers include style group paths. Review the actual export contract before sharing. Eligible overset repair can expand a terminal frame in a live preview while preserving its paragraph typography.

These are workflow mappings, not a promise that old settings, rule IDs, reports or cleanup commands transfer one-to-one. The 26 current typography rule IDs are not the old 43-report-identifier contract.

Typography advice in the source edition

The new inspector explains all 26 rules and can show a narrowly justified replacement. This is reading assistance, not the old Safe Clean workflow. Use Found, Suggested and Text locale, review meaning, then edit deliberately and rescan. Advice based on an observed pattern does not establish correctness.

3. Prepare a safe transition

1. Keep the old plugin/package and its 1.1 documentation for existing jobs.
2. Save a clean duplicate of a representative document.
3. Clear old Avellio diagnostic marks using the old panel before closing it.
4. Install the trusted 2.0 CCX through its supported Adobe flow.
5. Activate the installed copy with its legitimate provider key or Direct Trial.
6. Start with a small scope and compare findings against the actual document.

Do not run both editions on the same document concurrently. Diagnostic condition ownership can overlap. A lower count in the new version does not establish better quality unless scope, modules, rules and coverage are comparable.

4. Settings and activation

Open **License** → **Activate license** in Avellio 2.0, select the provider shown in your key email, enter the key and choose **Activate license**. For a supplied trial key, choose **Avellio Direct Trial**. Confirm an **Active** status. If you are unsure which key to use, contact license@avellio.app.

Export and import supported UXP profiles through the panel. Old 1.1 presets are not promised to satisfy the current profile schema without a validated migration.

5. Compare a real job

Inspect the same saved copy with a documented scope. Record the selected modules, active profile, language policy, host version and build. Check rivers/composition, style overrides and typography separately. Read table/footnote coverage warnings. Review the exact inspector evidence before trying one safe correction.

In 2.0, review decisions are local queue metadata. **Mark as addressed** does not edit the document or prove that a finding disappeared. Reinspect after a real edit. Use InDesign Preflight and human proofreading as before.

6. Update and recovery expectations

The frozen 2.0.5 macOS package was accepted as an update over 2.0.3, with the existing active profile observed afterwards. In an earlier RC6-to-RC7 test (2.0.0 to 2.0.1), Adobe refused direct installation of the older package over the newer one. A supported remove/reinstall recovery drill remains unperformed; the owner deferred it. Keep a known-good package and supported profile exports, and do not assume a transparent downgrade.

This guide makes no changes to store prices, subscription terms or the old published PDF files.

Learn the current workflow

Use the Learning Guide for new control effects and job-based routes. The Colour Atlas uses the current 26-rule palette. Some labels and colours differ from the old edition; use the current rule name as well as its dot. Training examples and possible editorial outcomes do not restore the 1.1 Safe Clean interface.
