Release Notes

Current build 2.0.5 source review

Avellio 2.0.0

Describes plugin 2.0.5 source review

Documentation edition · 30 October 2026 · Revision 7

Inspect. Review. Decide. Verify.

For Adobe InDesign 2026 · UXP panel

Source-edition documentation · Revision 7

1. Documentation identity

This collection is labelled **Avellio 2.0.0** and documents plugin build **2.0.5 source review**, checked on 24 October 2026. It describes the current source edition. Documentation approval and local preview do not constitute a final plugin release.

Edition availability: This guide describes the source edition checked on 29 October 2026. The previously prepared 2.0.5 installer does not include the new Typography recommendations. Installed-panel validation of those recommendations remains pending.

2. Current 2.0 workflow

- A UXP panel with White Space, Styles and Typography areas over a shared findings queue.
- Explicit inspection scope and module selection, captured run provenance and freshness checks.
- River, texture and copyfit evidence alongside Styles and language-sensitive Typography.
- Contextual marking, Style Map and relative Style Frequency Heatmap.
- Constrained Explore/Preview/Apply and eligible single-property style override reset.
- Six built-in inspection profiles, custom/local/imported standards and governed exceptions.
- Publication aggregation and serial scanning of selected already open documents, including eligible open Book chapters.
- Privacy-safe diagnostic JSON, local review metadata and five interface languages.
- License activation through the panel using the provider shown in the supplied key email.

3. Current source changes

The 29 October source edition adds read-only recommendations for all 26 Typography rules in compact findings and the full inspector. It shows exact evidence, conditional proposals, locale, visible whitespace and contextual advice in five interface languages. Stale recommendations require a new inspection. No automatic replacement or batch correction is added.

The earlier 2.0.5 customer package remains a separate frozen installer. Its macOS acceptance does not establish installed acceptance of the new card.

4. Evidence and unresolved work

The 29 October recommendation checkpoint records 2,684 passing client tests. The documentation update separately rebuilt the current source and checked its 32 native script variants. Frozen 2.0.5 macOS installation and ordinary workflows have recorded acceptance; this does not extend installed acceptance to the new recommendation card.

The observed nondefault profile after updating does not establish exhaustive settings retention. Adobe refused a direct downgrade, and the supported removal/recovery drill remains unperformed under the owner's deferral decision. Final public release approval is not asserted.

5. Documentation files and preservation

Revision 7 removes superseded platform statements following publisher review, without changing plugin functionality. This edition provides eight guides: the User Manual, Quick Start Guide, Learning Guide, Typography Colour Atlas, Workflow Cheat Sheet, Migration Guide, Compatibility Reference and these Release Notes. Each web topic and its matching PDF comes from the same versioned Markdown source.

Coverage revision after the feature audit

The 29-chapter User Manual now adds detailed references for detector thresholds and metrics; the full Style catalog, Override Map and colour transfer; protected profiles and typography governance; library lifecycle; solver alternatives and queued proposals; publication integrity/structural evidence; Logs; keyboard controls and the distinction between customer support and internal development tools.

The review corrected two material boundaries: an eligible solver candidate can change terminal-frame geometry, and Publication export retains document names. It also documents the RC7 Balanced/Normal quick-control mismatch and the Settings workaround, based on source review. This revision changes documentation, not plugin code or its release-acceptance status.

The 1.1 Markdown, released PDF files and existing article URLs remain available through the legacy tab. The 2.0 files have their own names and release directory. Prices, purchase links and commercial terms were outside this change.

Public activation guidance

The license instructions in this revision focus on opening the License panel, selecting the provider, entering a supplied key, confirming Active status and contacting support when needed.

Revision 4: learn, recognize and decide

The Learning Guide adds a short working model, a first small inspection, five production scenarios, four disposable-document exercises and a plain-language glossary. The Typography Colour Atlas explains all 26 rules with current plugin colours, examples, possible editorial outcomes, intentional exceptions and next steps. The User Manual and Workflow Cheat Sheet use the same rule markers.

The web overview offers routes for learning, understanding a finding and looking up a control. Practice answers can be revealed on the web and remain visible in the PDF. Colour always appears with a rule name or identifier; urgency remains separate. Examples are teaching diagrams, not screenshots or promises of automatic correction.

This revision updates documentation only. The plugin build and its acceptance boundaries are unchanged. Earlier revision PDFs remain separate, and the previous Markdown edition remains in repository history. The licence guidance remains limited to user activation and ordinary support.

Revision 6: read and use Typography recommendations

All eight Markdown guides, matching PDFs and web guides now describe the 29 October source edition. The atlas adds per-rule guidance, the learning guide adds recommendation practice, and the reference explains dates, locale, whitespace symbols and stale advice. Earlier PDFs remain archived with their original bytes.
